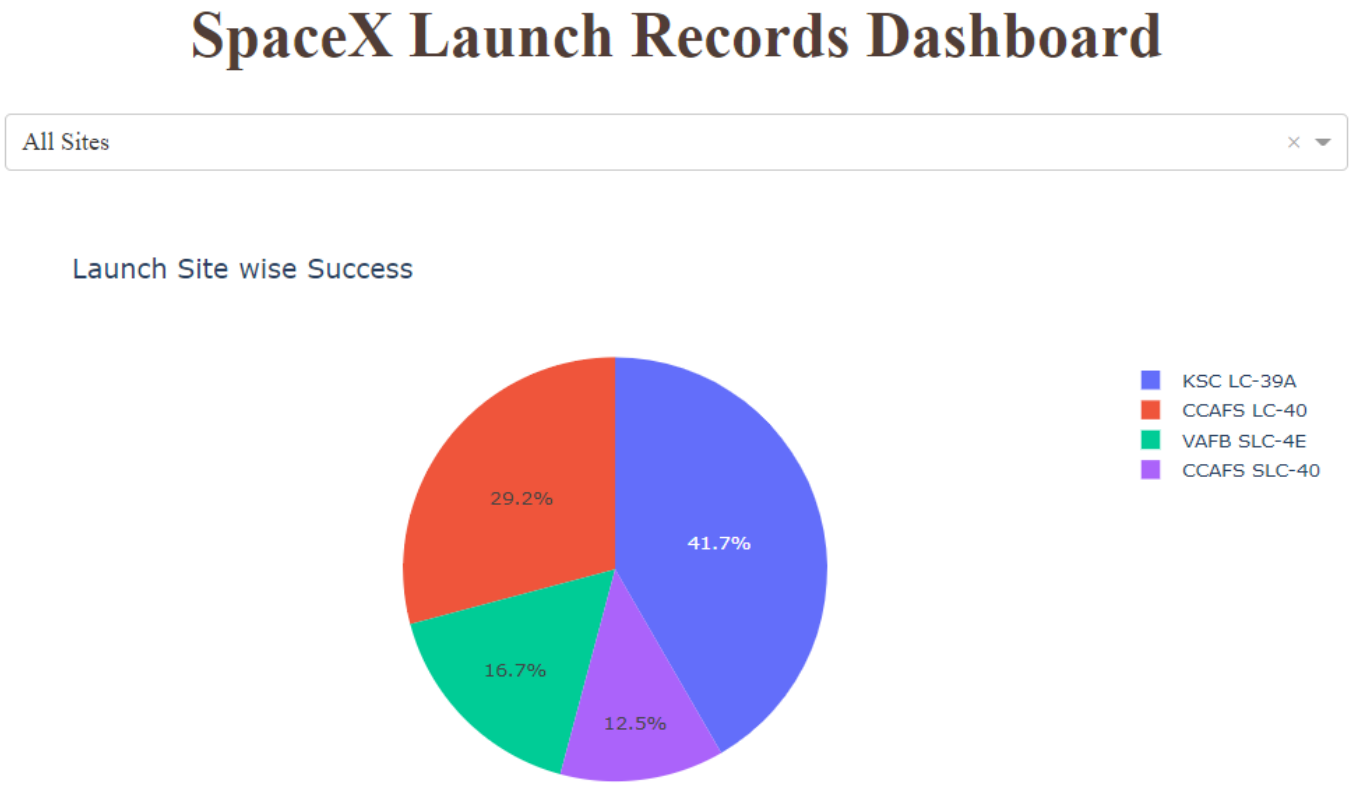
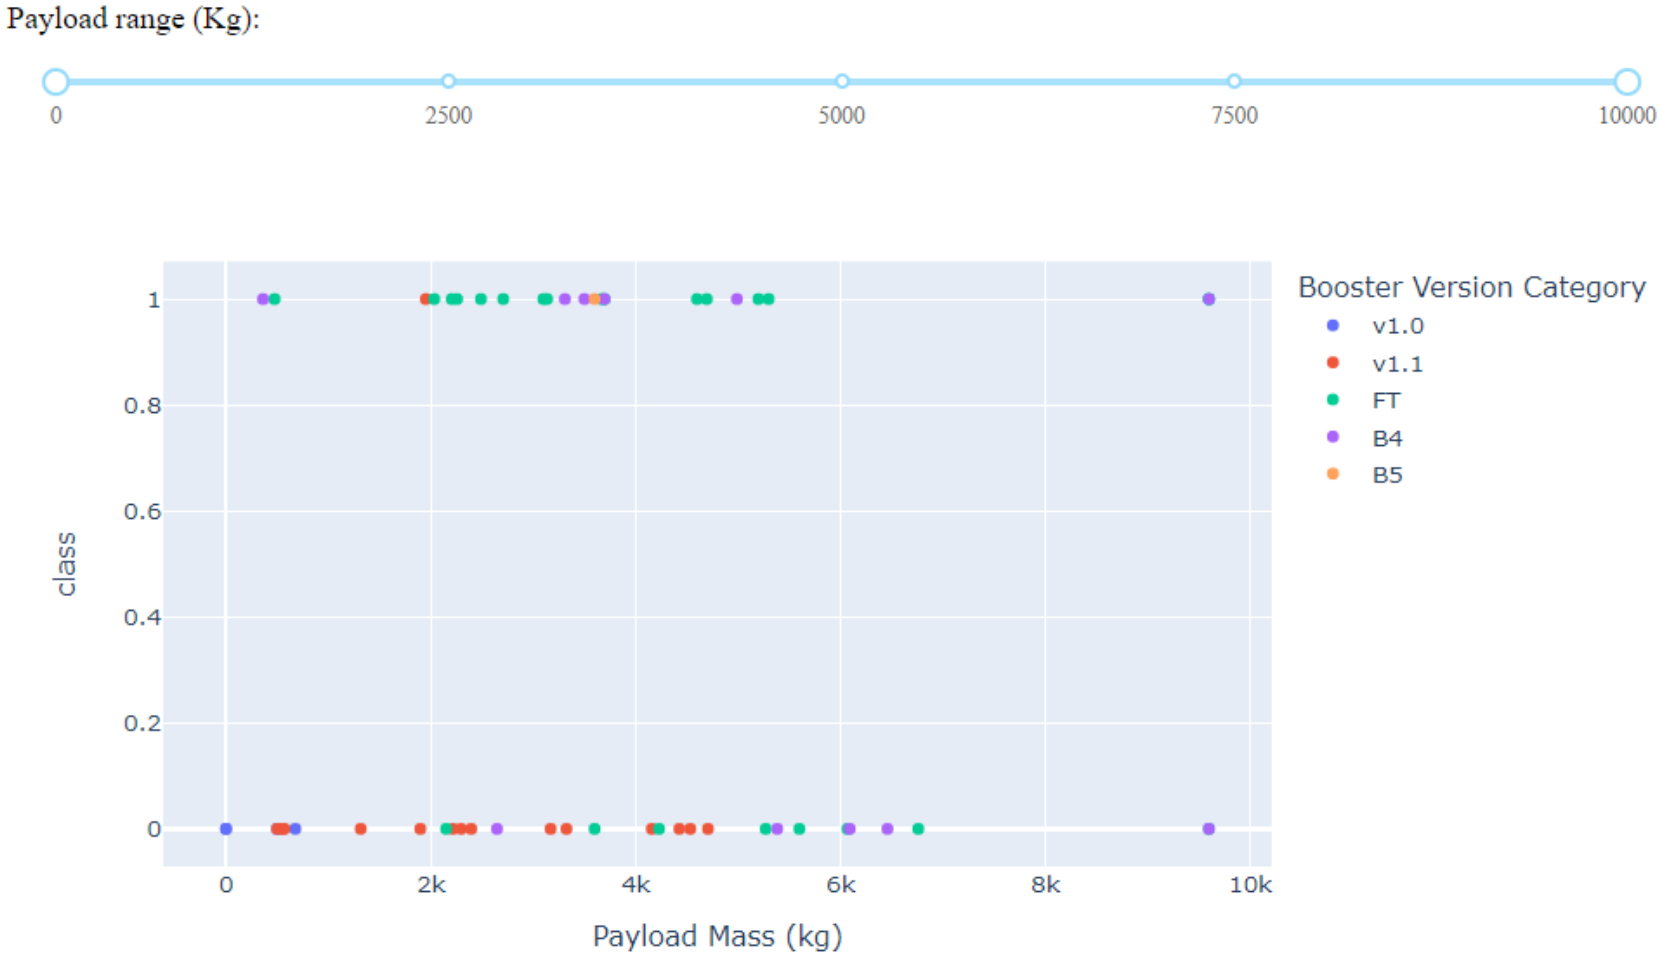
Plotly Dash interactive Dashboard

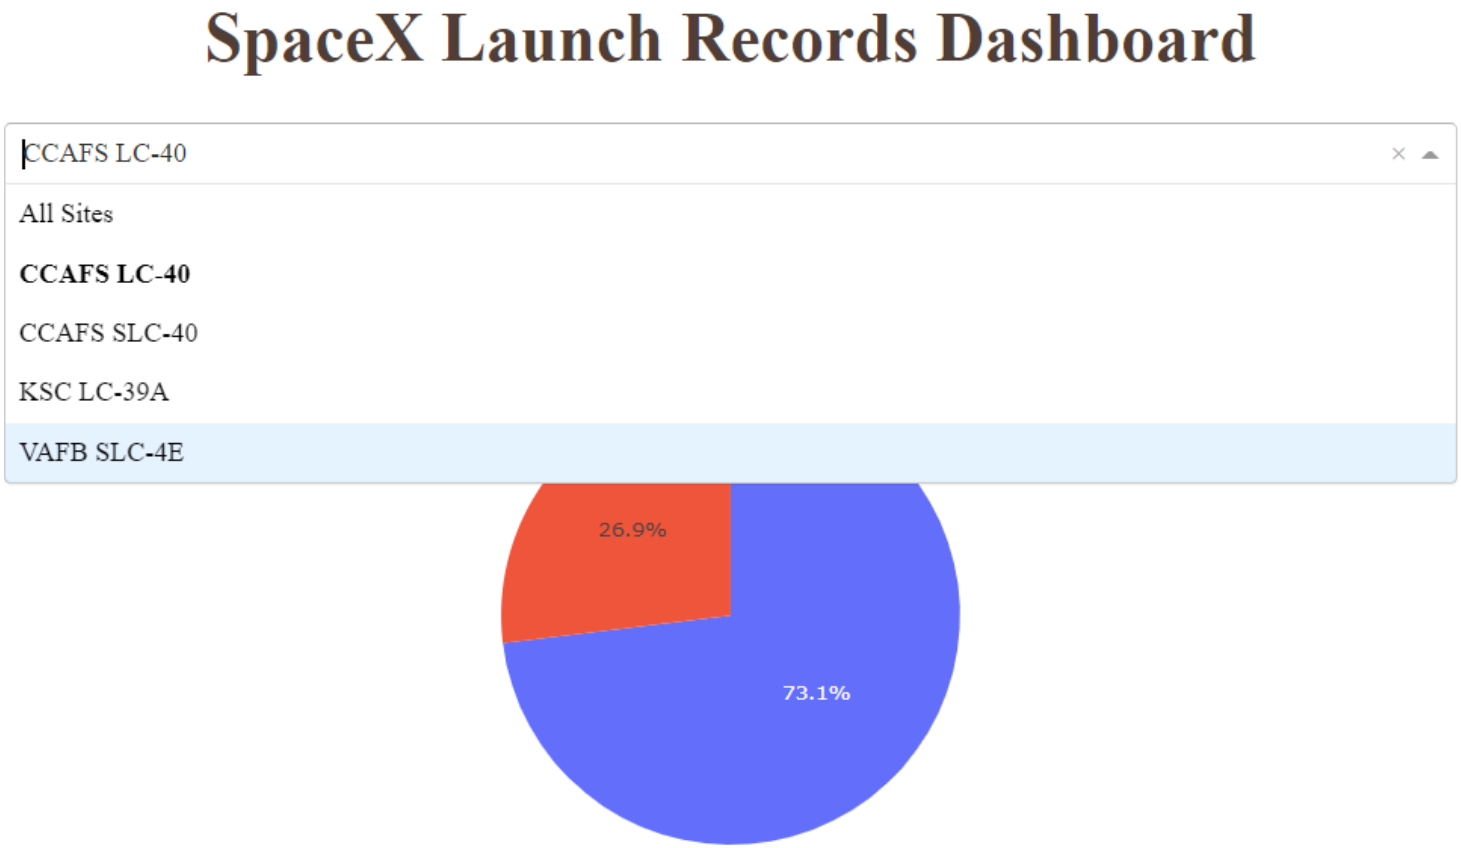
By default all sites are selected and success contribution of each of the site is displayed in the pie chart.



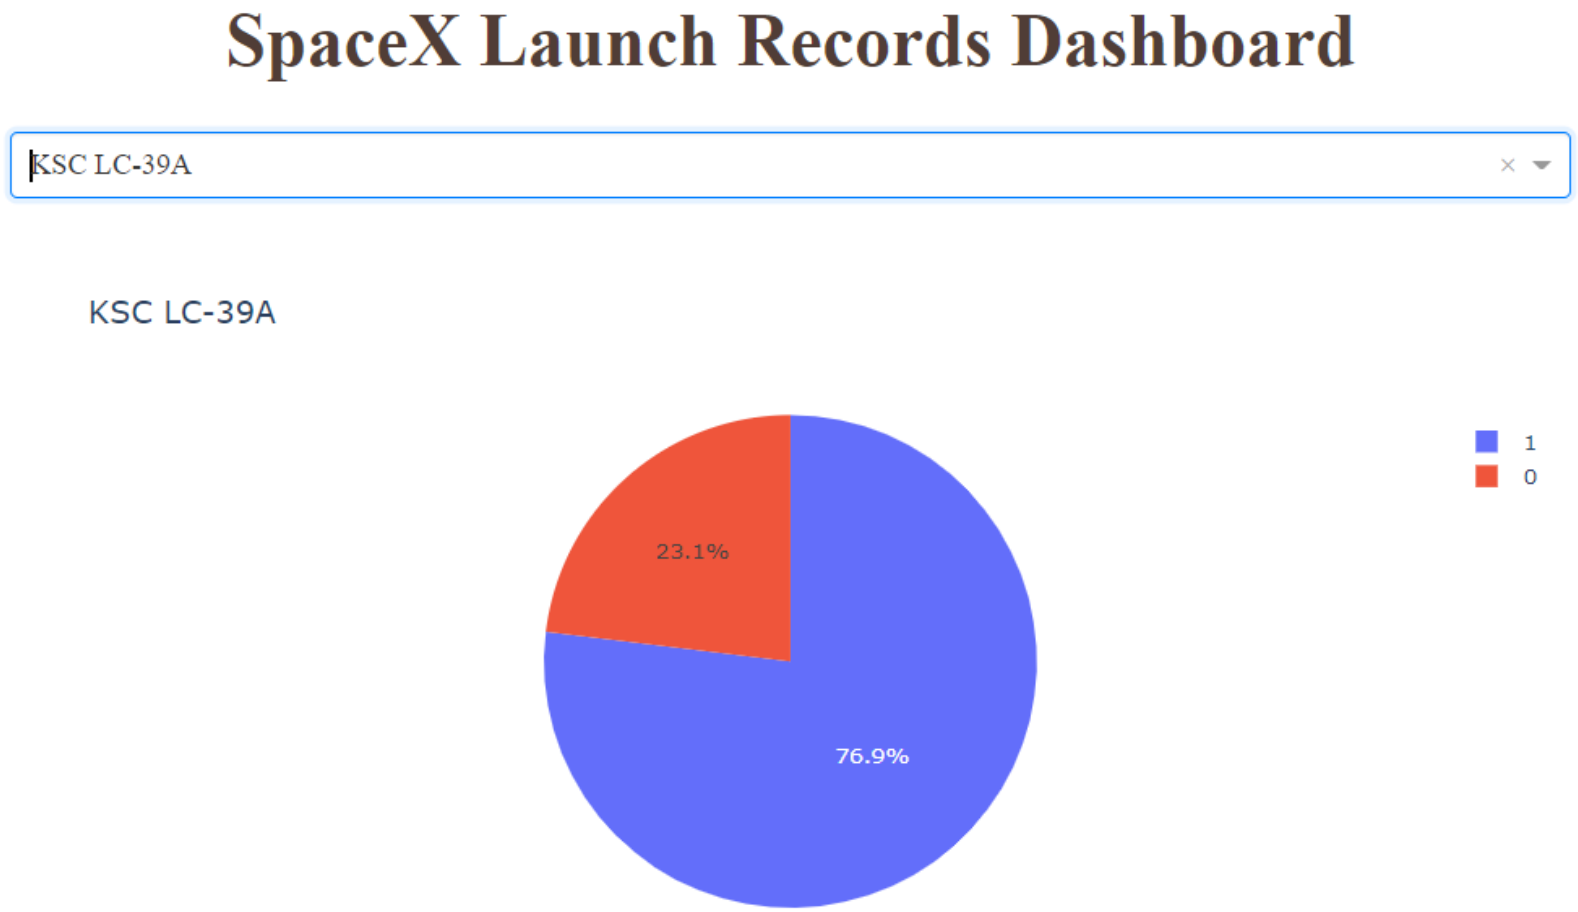
Scatter plot is displayed for all sites success / failure classification in correlation with the Payload Mass and colour coded by the Booster version category.



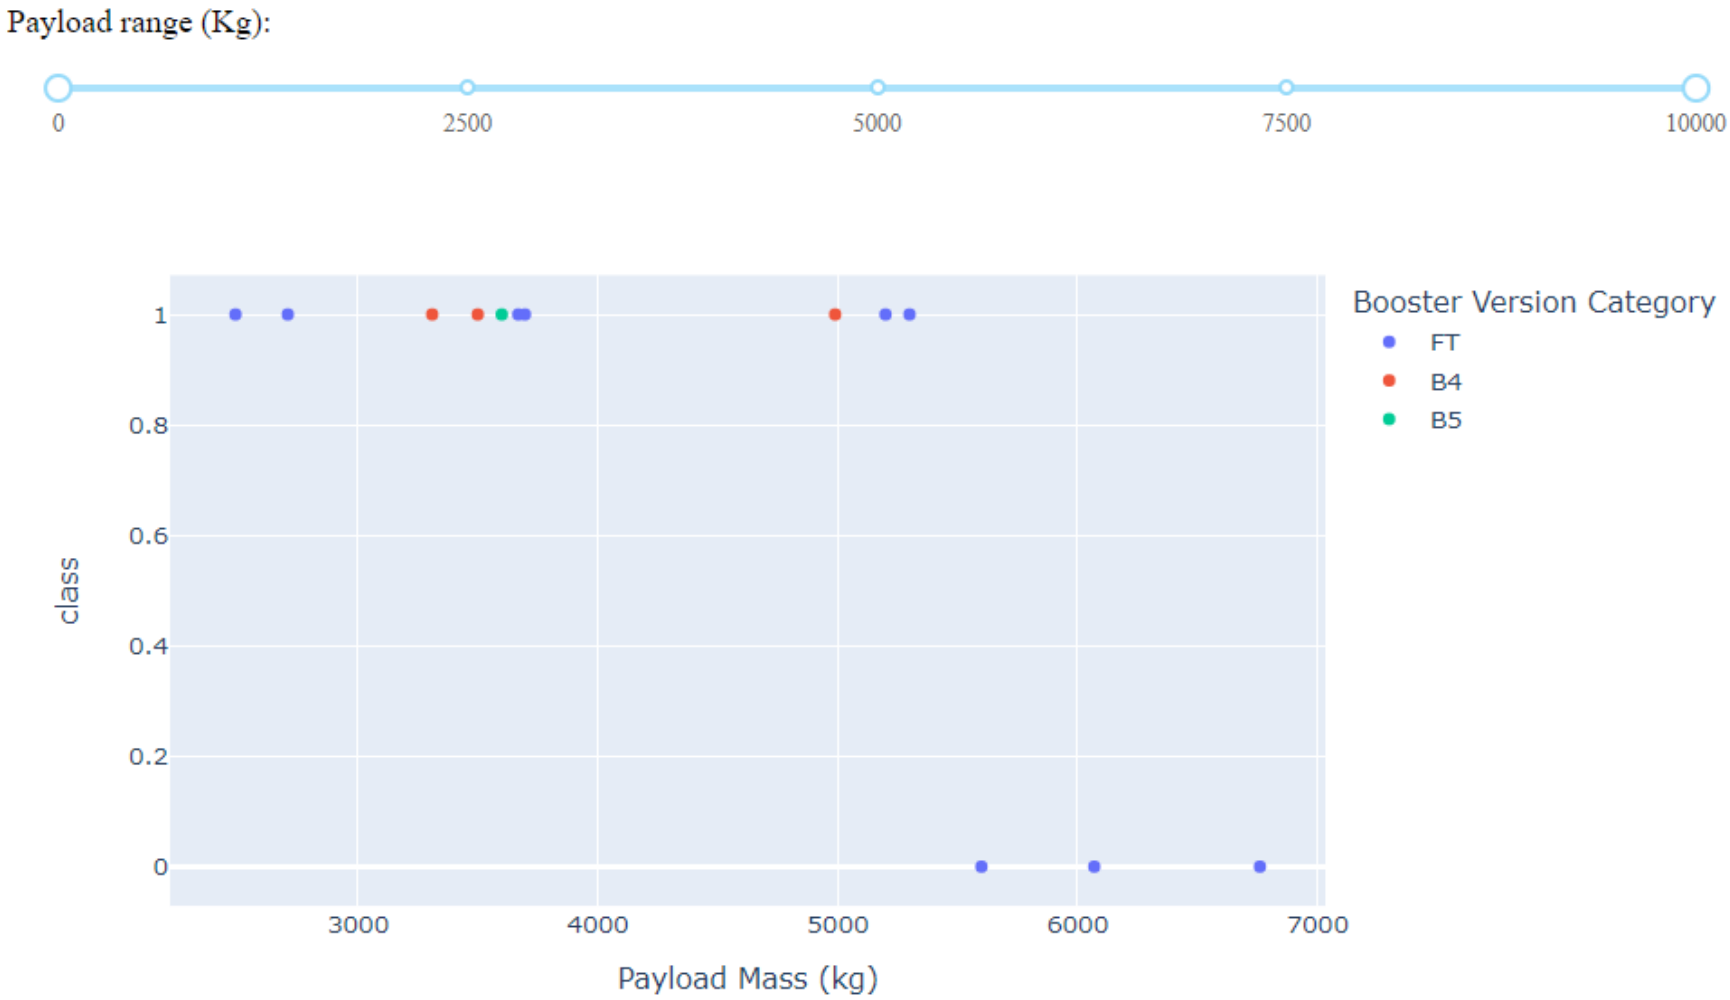
Dropdown is available to select the specific launch site.



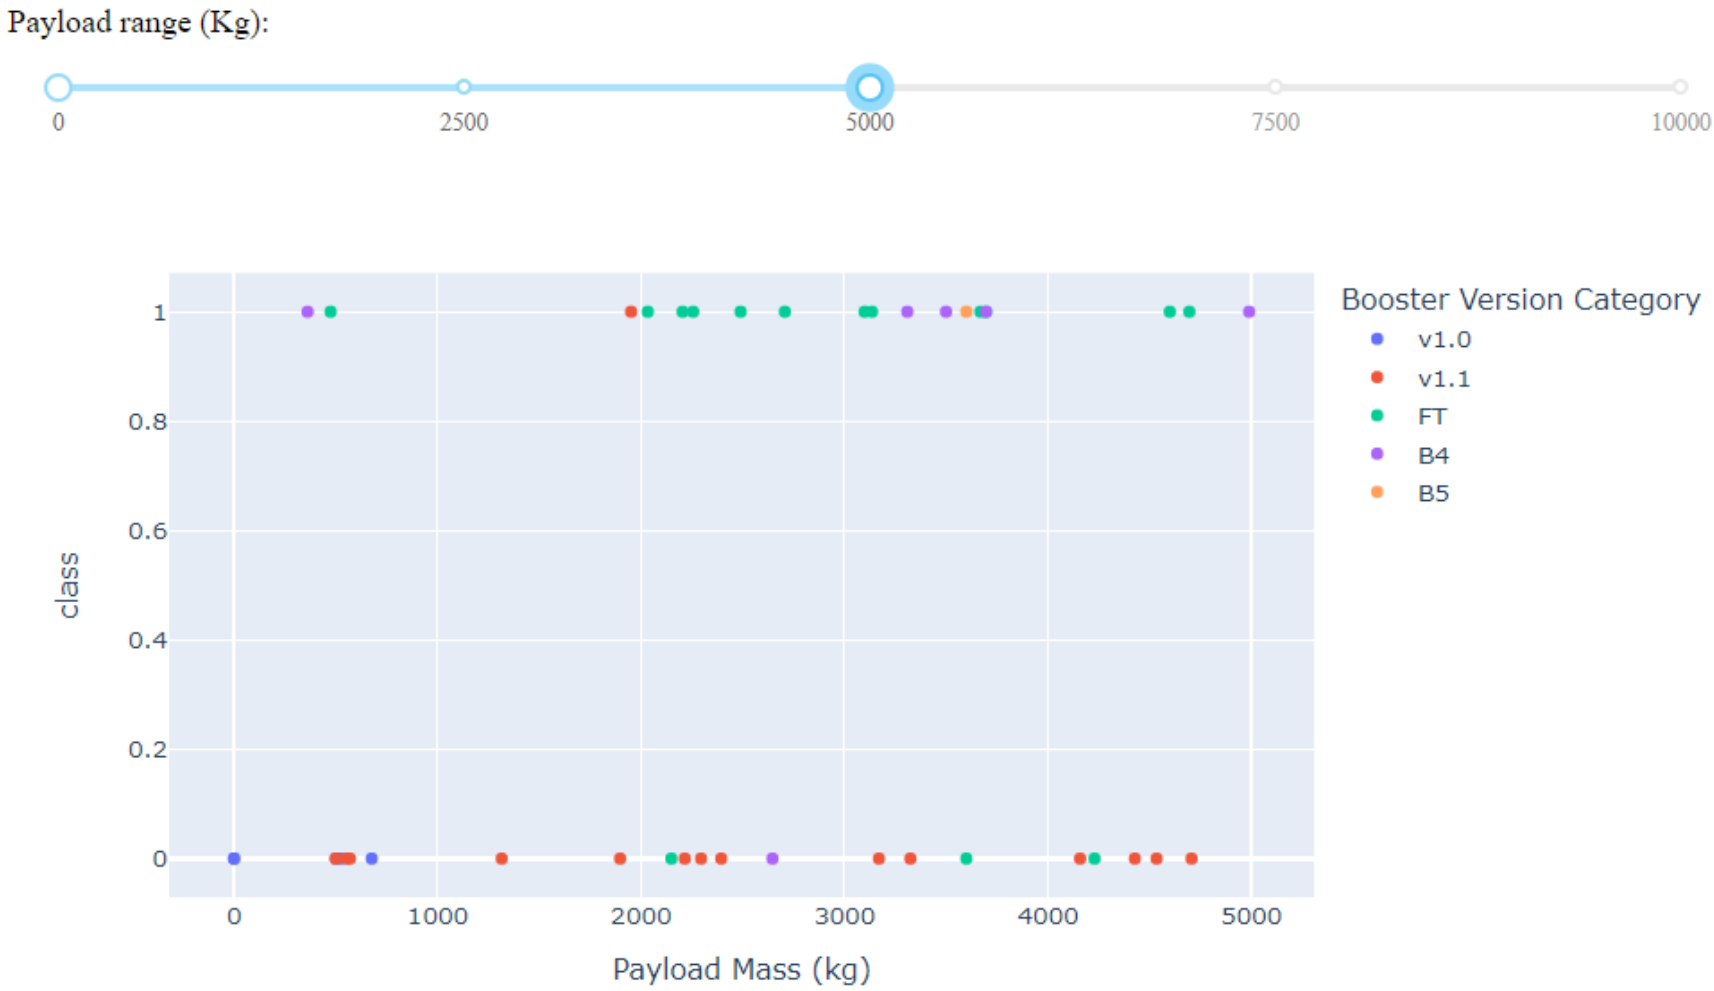
When a specific launch site is selected pie chart displays the success rate of that site.

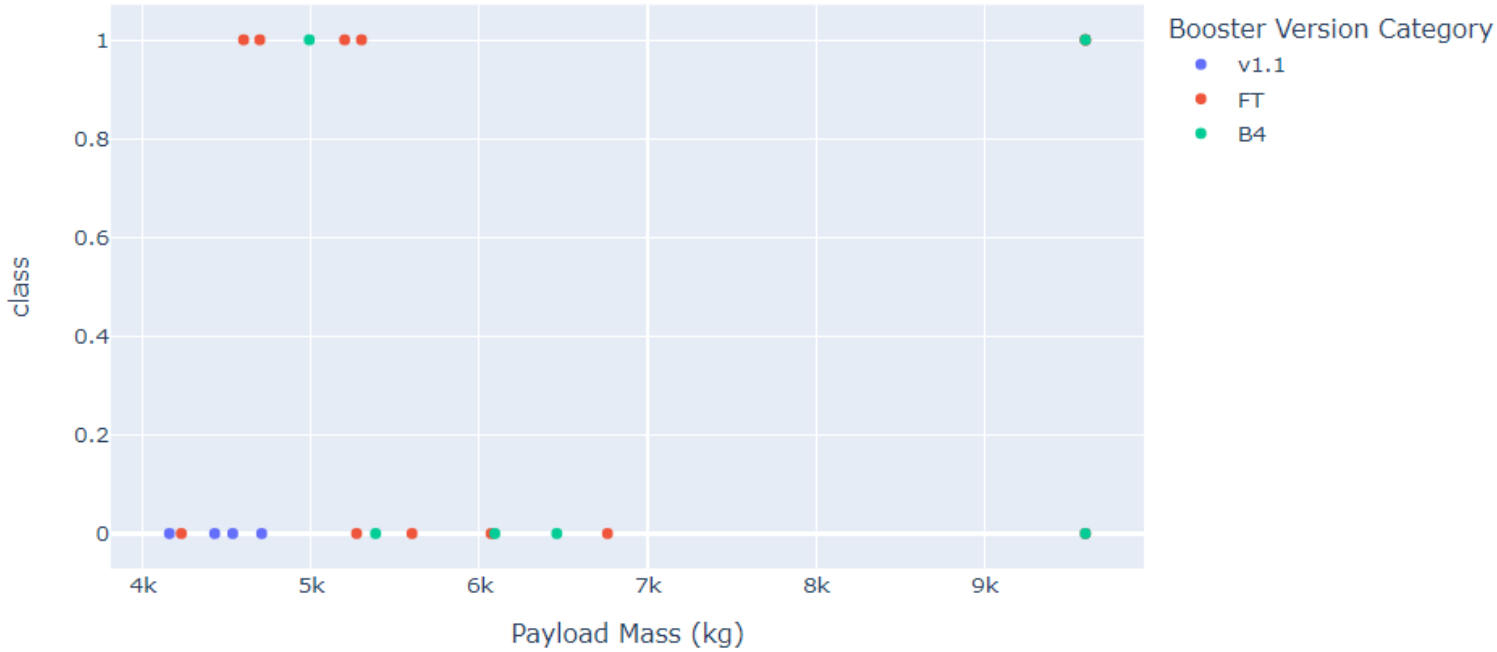


When specific site is selected the scatter plot also shows the correlation of that particular launch site.



There is slider provided which can be adjusted to select specific payload range and scatter plot will only show data point for the given range.





Payload range (Kg):
